TECHNICAL SUMMARY

Self-taught Developer with a "get it done" mindset. I specialize in React and React Native, with a deep interest in DevOps automation. I recently migrated my entire development stack from Windows to Pop!_OS (Linux) to solve hardware-glitching issues and gain better control over my environment. I'm not just a "Code Monkey"—I care about the environment the code runs in, the speed of the build, and the user's experience.

EXPERIENCE

Freelance Developer | Fiverr

Operating as an independent developer for custom web components and React-based fixes. Managing client communication and delivering code under tight deadlines.

DevOps Transition (Personal Challenge)

Successfully rebuilt a full-stack development environment on Linux after facing hardware rendering glitches on Windows. Configured local Docker containers and CI/CD pipelines to ensure consistent deployment results.

EDUCATION

O-Level (Geography, Heritage Studies, Combined Science), *Madhuku Secondary School*

Self-Directed Learning

1000+ hours of documentation-study and project building in React/DevOps.

CORE TECH STACK

Frontend

React React Native (Expo) Tailwind CSS Lucide Icons

DevOps & Tools

Docker (Containerization) CI/CD basics Linux CLI Git/GitHub

Backend & Database

Node.js Firebase (Auth/Store) SQLite (Local Persistence)

Environment

Pop!_OS (Debian-based), migrating and optimizing dev-environments for performance.

KEY PROJECTS

FocusFlow: Habit Tracker (Mobile App)

Built a mobile-first habit tracker from scratch using React Native. Solved complex state issues for streak tracking and persistent local storage using SQLite. Handled rich media integration, including custom video walkthroughs for project demos.

Professional Corporate Portfolio (Web)

Developed a high-performance portfolio featuring glassmorphism and responsive design. Implemented smooth-scroll navigation and custom-built interactive UI components. Optimized the site for all devices, focusing on professional "SaaS-style" aesthetics.
